

HARSH ENVIRONMENTS: FIELD INSTALLABLE WEATHER-PROOFING KIT FOR 4.3-10 CONNECTORS

4.3-10 Connectors The IP Sealed Interface

Torque independent and irrespective of the plug type, the Rosenberger 4.3-10 connectors deploy a radial gasket to provide an IP 68 sealed interface in a mated condition.

Under normal conditions it will not be required to install any secondary weather-proofing. However, extreme conditions might give considerations to second thoughts as no one would like to be faced with galvanic corrosion caused by water, ice and salt.

Rosenberger Weather-proofing Kit (WPK) - Features and Benefits

- A two-piece easy-to-install kit
- Field-installable
- Suitable for new and existing installations
- Fits to all 4.3-10 connector types
- Ideal safety measure to protect 4.3-10 transition points in harsh environments

4.3-10 Connectors

Rosenberger Weather-proofing Kit (WPK)

Easy to install in the field, the Rosenberger WPK kit has especially been designed for such application as it protects the coupling mechanism of a 4.3-10 connector thus avoiding any potential risks in terms of water or salt penetration.

The WPK is available for standard as well as super flexible 1/2" coaxial cables.
