Coaxial Feeder Cables 50 Ω
High Performance Transmission Line Solutions
Rosenberger Site Solutions – Much More Than Technology

The Rosenberger Site Solutions Group designs, manufactures and provides solutions for the wireless infrastructure market. Our products and systems offer innovative and leading-edge designs with a focus on high performance and quality. Having an efficient network implementation in mind, we focus on total site kitting, logistics and delivery time leading to reduced cost of ownership. Globally present, the Rosenberger Site Solutions Group offers extensive local support making Rosenberger Site Solutions a partner instead of just a supplier.
The Rosenberger online catalog contains the current standard product range with specific details, including data sheets, assembly instructions and panel piercings.

Home of Innovation

A global network of Rosenberger R&D, manufacturing facilities and sales offices provides innovation, optimized cost structure and outstanding local customer service.

The Rosenberger headquarters located in Fridolfing in the southeast part of Bavaria, Germany
Company Profile

Rosenberger is one of the world’s leading manufacturers of impedance-controlled and optical-connectivity solutions. We provide these solutions in high-frequency, high-voltage, and fiber-optic technology for mobile communication networks, data centers, test & measurement applications, automotive electronics, as well as high-voltage contact systems, medical electronics and aerospace engineering.

A global network of R&D, manufacturing and assembly locations provides innovation, optimized cost structure and excellent customer services. A total of around 10,000 employees are involved in the development, production, and distribution of our products.

Rosenberger Group

Europe
- Germany: Fridolfing, Augsburg, Laufen, Radeberg
- Austria: Timelkam
- Hungary: Jászárokszállás, Jászberény, Taksony
- Denmark: Birkerød
- Sweden: Kista, Solna, Ytterhogdal
- Spain: Madrid

North America
- USA: RNA Plano, RNA Akron, RNA Pennsauken, RSS Lake Charles

South America
- Brazil: Caçapava – São Paulo
- Chile: Santiago

Asia
- China: Beijing, Kunshan, Dongguan
- India: Manesar, Goa
Quality and the Environment

Ensuring the optimum quality of products and services and taking responsibility for our environment are fundamental elements of Rosenberger’s corporate philosophy. Our approach to ensuring quality covers more than just the optimization of parts and products – it also includes the continuous improvement of all company processes: from product development, planning, procurement, production, sales, and logistics right through to environmental policy. To summarize, we want to offer maximum benefits for our customers all over the world.

We aim to act in an environmentally conscious manner, use materials economically, protect natural resources, recycle, and ensure energy efficiency.

As we have continuously improved our processes and consistently applied our quality management systems, we have been awarded many certificates.

Certifications
- IATF 16949
- DIN EN 9100
- ISO 9001
- ISO 14001
- DaKKs accreditation according to DIN EN ISO 17025

Rosenberger has won a number of prestigious quality awards and prizes from several renowned customers and organizations for achieving its quality and environmental objectives.
Our Promise to You. And to Quality and the Environment.

The quality of our products, solutions, and services is an essential part of our corporate strategy.
High Added Value

Rosenberger’s mission is to be a leader when it comes to innovation and technology within its business segments.

The ongoing focus on cost management and process optimization complements our commitment to the increasingly stringent requirements for delivering products of the highest quality. Effective research & development, the very latest manufacturing technologies, the highest possible levels of efficiency in production processes, and continuous improvement of process automation make up Rosenberger’s core competencies.
Research & Development
Science-based expertise in high-frequency applications combined with in-house RF, and EMC laboratories enable us to continuously improve existing products and to design innovative new products and systems. Numerous patents show Rosenberger's leadership as a reliable and creative development partner.

Production
By manufacturing everything in-house and using state-of-the-art manufacturing technologies, Rosenberger can continue to develop and optimize key manufacturing technologies – turned-parts production, stamped & formed technology, injection molding technology. Manufacturing everything in-house ensures a high degree of flexibility, and continuous quality controls, and means that newly designed products can be produced in the required quantities.

Plating Technology
Our components can be electroplated quickly and flexibly in our own in-house electroplating facilities, regardless of whether this is to provide corrosion protection, optimized conductivity, or other technical and physical characteristics. Environmental protection is another key factor which must be taken into account when coating surfaces.

Assembly
Rosenberger operates manufacturing and assembly locations around the world – fully automated assembly centers and customer-oriented cable assembly locations offer global support and local sourcing.

Injection Molding
We use the very latest machinery and methods, as well as special materials and components to ensure the precision and durability of our tools and products. Rosenberger is able to process all available high-performance plastics.
Coaxial Cables

Outdoor Coaxial Transmission Line Overview
Coaxial Cables 50 Ω
Rosenberger offers a complete range of 50 Ω coaxial cables, from 1/4” to 1 5/8”.

The cable range provides best in-class electrical and mechanical performance:

- Low attenuation
- Low VSWR/RL
- Complete EMI shielding to minimize system interference
- Outstanding PIM performance
- High-power rating

The cable construction is similar for all cable sizes: Inner conductor, foam dielectric, outer conductor and outer jacket.

The inner conductor is made of a copper clad aluminum wire and a smooth or corrugated copper tube dependent on cable size. The use of high conductivity copper guarantees excellent low-loss performance.

The foam insulator consists of a mixture of low dielectric polyethylene – melted and extruded utilizing an insert gas injection process. Low density, close and homogenous cell dielectric contributes to further excellent low-loss performance and minimized risk of water penetration.

The outer conductor is made of copper and has a longitudinal weld that provides high quality screening and a tight bending radius.

The cables are available as standard with either a PE jacket for outdoor installations or in a flame retardant and halogen-free version to comply with indoor requirements for health and safety (IEC 60332 and CPR-EN 50575).

### Mechanical Characteristics
- **Inner conductor**: Copper clad aluminum wire, 2.6 mm
- **Dielectric**: Foamed PE, 6.4 mm
- **Diameter over outer conductor**: Corrugated copper, 7.6 mm
- **Diameter over outer jacket**: PE / FRNC, 9.5 mm
- **Cable with standard UV resistant and halogen-free PE / FRNC**: approx. 94 kg/km
- **Tensile strength**: 560 N
- **Min. bending radius, single**: 50 mm
- **Min. bending radius, repeated**: 120 mm
- **Number of bends, minimum (typical)**: 15 (50)
- **Recommended hanger spacing**: 0.6 m
- **Installation temperature**: -25 °C to +60 °C
- **Operational temperature**: -40 °C to +85 °C

### Electrical Characteristics
- **Impedance**: 50 ± 1 Ω
- **Relative velocity of propagation**: 85 %
- **Capacitance**: 78.5 pF/m
- **Inductance**: 0.195 μH/m
- **Maximum operating frequency**: 7.5 GHz
- **Cut-off frequency**: 19.0 GHz
- **Peak power rating**: 7.5 KW
- **DC breakdown voltage**: 2200 V
- **Jacket spark, volts RMS**: 5000 V
- **Inner conductor DC-resistance**: ≤ 6.05 Ω/km
- **Outer conductor DC-resistance**: ≤ 4.45 Ω/km
- **Insulation resistance**: ≥ 10 GΩ x km
- **Return loss 800 – 1000 MHz**: 26 dB
- **Return loss 1700 – 2500 MHz**: 24 dB

Super Flexible Coaxial Cables
Rosenberger Super Flexible coaxial cables are designed for use in tight routing spaces. Typical applications include connections inside mobile base stations and jumpers for connecting the base stations, transmission lines and antennas.

Super Flexible cables have superior electrical and mechanical performance, and are ideal for applications requiring the tightest bending radii, high flexibility, low attenuation and high shielding.

Rosenberger Super Flexible coaxial cable assemblies achieve the highest standards in the industry including excellent intermodulation (IM3) and return loss performance.

The inner conductor consists of a copper clad aluminum wire. The outer conductor is made of a welded copper tube with spiral corrugations and marked accordingly with the letter 'S'.

The Rosenberger Super Flexible coaxial cables are available with outer jackets made of either polyethylene or flame-retardant, halogen-free materials.

Low Loss Coaxial Cables
Rosenberger 7/8" RL, 1 1/4" RL and 1 5/8" RL Low Loss coaxial cables are specifically designed to correspond to requirements of the mobile, cellular and broadcast networks. They deliver excellent performance for connections between the base station and antennas.

The transmission characteristics of the Rosenberger Low Loss coaxial cables have been improved significantly while still maintaining the outer dimensions to suit all connectors and installation material.

The inner conductor consists of a smooth copper tube for the 7/8" RL and the 1 1/4" RL and a corrugated copper tube for the 1 5/8" RL. The outer conductor of each cable is made of a welded copper tube with annular corrugations and marked accordingly with the letter "R" and "L" for Low Loss.

The Low Loss coaxial cables are offered with outer jackets made of either polyethylene or flame retardant, halogen-free materials.

**Mechanical Characteristics**

- **Inner conductor**: Copper tube, 9.45 mm
- **Dielectric**: Highly foamed polyethylene, 22.4 mm
- **Diameter over outer conductor**: Regular corrugated copper tube, 25.4 mm
- **Diameter over outer jacket**: PE / FRNC, 27.6 mm
- **Cable with standard UV resistant and halogen free PE / FRNC**: 410 kg/km (480 kg/km)
- **Tensile strength**: 1450 N
- **Min. bending radius, single**: 120 mm
- **Min. bending radius, repeated**: 250 mm
- **Number of bends, minimum (typical)**: 15 (50)
- **Recommended hanger spacing**: 1.0 m
- **Installation temperature**: -25 °C to +60 °C
- **Operational temperature**: -40 °C to +85 °C

**Electrical Characteristics**

- **Impedance**: 50 ± 1 Ω
- **Relative velocity of propagation**: 89 %
- **Capacitance**: 74 pF/m
- **Inductance**: 0.195 μH/m
- **Maximum operating frequency**: 5.0 GHz
- **Cut-off frequency**: 5.2 GHz
- **Peak power rating**: 95 KW
- **DC breakdown voltage**: 10000 V
- **Jacket spark, volts RMS**: 8000 V
- **Inner conductor DC-resistance**: 1.39 Ω/km
- **Outer conductor DC-resistance**: 1.22 Ω/km
- **Insulation resistance**: ≥ 10 GΩ x km
- **Return loss 800 – 1000 MHz**: ≤ -26 dB
- **Return loss 1700 – 2500 MHz**: ≤ -24 dB

Rosenberger connectors are available in 7-16 DIN, N and 4.3-10 series with both female and male interfaces. All connectors are designed for ease of attachment while providing consistent industry leading performance.

Rosenberger connectors have excellent mechanical and environmental properties that ensure long-term durability and performance in both indoor and outdoor installations.

All Rosenberger connectors are coated with a specially selected flash white bronze over silver plating. This coating is specifically selected to provide protection against oxidation while delivering exceptional intermodulation performance and electrical conductivity.

Tools

Universal Preparation Tool
With exchangeable inserts for 1/2", 7/8", and 1 1/4", the tool is ideal for fast, easy, and reliable cable preparation. The high-precision cutting blades ensure smooth cuts resulting in low-PIM connector installations.

Low-PIM, On-Site Connector Installation

To achieve the best PIM test results we recommend following the procedures below in addition to the recommendations outlined in the assembly instructions included with each individual connector.

It is very important to keep the prepped cable and connectors absolutely clean of dirt, metal particles, and scratches.

Prepare the cable according to assembly instructions (e.g., with tool SLT001-Cxx).

Use a plastic tool for removing the cut-off bond on the dielectric (e.g., SLT004-000).

On cables with tube inner conductor, remove burrs and sharp edges on the inside of the conductor (e.g., flaring tool integrated in tool SLT001-Cxx).

Before finally attaching the connector to the cable, clean the contact areas of the cables with alcohol by using non-metallic cleaning brushes/tools (e.g., SLZ0009-000).

RF Jumper Cables

Superior Performance up to 6 GHz

Rosenberger coaxial jumpers have been designed using the many years of experience gained by Rosenberger engineers in this field. Rosenberger's unique knowledge of designing and manufacturing world-leading PIM testing equipment is directly reflected in the jumpers.

Rosenberger jumpers have the industry-best PIM levels:
-117 dBm / -160 dBc @ 2 x 20 W (typ. -120 dBm / -163 dBc @ 2 x 20 W).

These excellent levels are guaranteed for every assembly that leaves the Rosenberger production facility.

- Specially developed connectors using proprietary soldering technique guarantee superior electrical performance
- Injection molded sealing between the cable jacket and connector ensures mechanical stability and weather-proof protection according to IP68
- Excellent return loss due to silver-plated connectors and attenuation-optimized cable
- Low intermodulation, IM3
- Guaranteed -160 dBc @ 2 x 20 W (typ. -163 dBc) – dynamic testing
- 100 % factory tested for PIM and RL
- Available with flame retardant, halogen-free cable jackets (FRNC)
- Available in any cable length with a large variety of connector combinations

Traceability – Online Measurement Reports

Every single coax jumper is tested for its return loss and PIM values after its assembly. By entering the serial number on our web-portal our customers are able to download the measurement reports of their cables.

Online Measurement Reports
Download VSWR and PIM measurements jumper.rosenberger.com

For a more convenient verification of the performance, the measurement report can easily be downloaded to mobile devices by scanning the DataMatrix code on the packaging.

Jumper Boot – RJB

Although jumpers comply with IP68, at times it might be required to add additional protection due to extreme weather conditions. The Rosenberger Jumper Boot, RJB, is an ideal alternative to tape. Whether pre-installed in the factory or installed in the field the RJB provides a fast, easy and durable solution.

Features and Benefits
- 7-16 DIN connectors (pre-installed in factory)
- 4.3-10 connectors (pre-installed in factory or field-installable)

Weather-Proofing Kits

Rosenberger Weather-proofing kits are a convenient way of fast and reliable IP-protection of RF connections on antennas and RRHs. The kits are field installable and can easily be removed and reused. The kits add the same additional high level IP-protection to the RF connection as tape while avoiding the hassle of installation.

Weather-proofing kit for transmission of 7/8" and 1 1/4" cable to 1/2"

Cold shrink tube for 7/8" to 3/8" super flexible
Weather-Proofing Tape

The tapes and mastics are used for protection of connectors, splices and interfaces that are exposed to corrosive environmental conditions. An additional feature is to prevent the loosening of connectors at jumper cable interfaces caused by vibration.

Surge Arresters

Lightning protection components are essential for protecting radio base stations against overvoltages. Coaxial surge arresters from Rosenberger – integrated directly in the transmission line from the antenna down to the base station – safeguard the system and provide reliable deflection in case of overvoltages, e.g., by lightning strikes.

Effective lightning protection systems deflect overvoltages, caused by surge currents up to 20 kA, resulting in a residual output voltage of only 100 V.

Rosenberger offers coaxial surge arresters for "non-directed" mounting, with and without gas discharge tubes.
Grounding Kits

Rosenberger Grounding kits are designed to withstand potential lightning strikes. A solid premium construction ensures elimination of corrosion caused by moisture and a long life time. Several options are available according to customer requirements.

Rosenberger Hoisting Grips are designed for hoisting feeder, power or hybrid cables up a tower or other site architectures. For long cable runs multiple grips have to be mounted on the cable to support the weight. The spacing depends on the cable. Once the cable is positioned in the cable clamps the grips can be attached to the structure to hold the cable weight.

Connectors for Field Installation
Rosenberger provides coaxial connectors for microwave links with N and TNC interface with straight or right angle cable attachment.

The connectors are designed for ease of attachment while providing consistent industry leading performance. Rosenberger connectors have excellent mechanical and environmental properties that ensure long-term durability and performance in both indoor and outdoor installations.

Product Features
- High performance shielding > 90 dB
- Low loss
- UV and weather resistant PE outer jacket
- Tinned copper outer braid that provides for connector retention and ease of grounding
- RoHS compliant
- Halogen-free

All Rosenberger connectors are coated with a specially selected flash white bronze outer contact and gold center contact. This coating is specifically selected to provide protection against oxidation while delivering exceptional performance and electrical conductivity.

T-Adaptor (Open-Short-Load)

Rosenberger’s T-Adaptor Open-Short-Load (OSL) unique "T" configuration integrates three termination standards into a single unit to simplify precision calibration of 50 Ω analyzers.

The variety of available connector types facilitates calibration at the analyzer’s test port or its adapted extension to mate directly with the input port of the device under test.

</table>
Loads
For testing and trouble shooting, these high quality precision loads are typically used to terminate system components at the characteristics impedance.

</table>
Adaptors
These precision adaptors can be used at the test port of the analyzer or its extension cable to provide a compatible interface with the specified system test point before starting the calibration process. The PIM optimized adaptors ensure optimum accuracy and stability for testing.
