

4.3-10 CONNECTORS IDEAL SOLUTIONS FOR TEMPORARY SITE DEPLOYMENT

It just has to Rock `n Roll

Getting ready for a big event such as an open air concert where thousands of people gather and expect mobile coverage and plenty of capacity to support immediate high quality transmission of voice and data to friends and family can be a challenge for operators and installation teams. Efficiency and precision is a must.

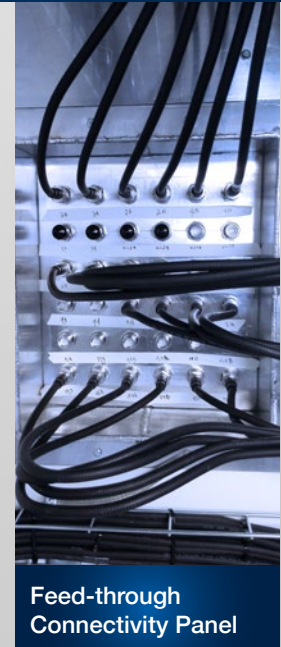

Rosenberger introduces a **new plug-and-play** concept ensuring a quick, smooth, reliable and efficient installation.

Jumper cables with 4.3-10 connectors for mounting on a feed-through connectivity panel with adapters for external cable connection to antennas and for internal cable connection to radio equipment.

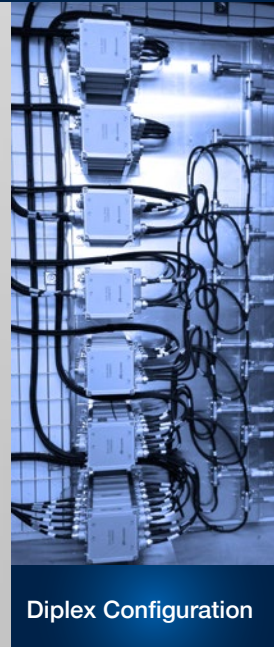

4.3-10 Connectors Features and Benefits

- Very low, reliable and constant PIM, independent of torque
- Small Footprint, 40% smaller compared to 7-16 connectors
- > 60 % weight reduction
- Excellent Electrical Performance, return loss and insertion loss
- 3 different plug types: screw, handscrew, push-pull
- Handscrew and push-pull type: minimum pitch 25.4 mm (no torque wrench)
- No risk of torque limit installation failures
- Adapters for upgrading existing 7-16 systems available
- The universal 4.3-10 jack type is compatible with all connector types

Feed-through Connectivity Panel

Diplex Configuration

One Jack for all Connector Types
